Chapter 1 – General concepts

A general introduction that includes the essential concepts, vision and the current focus on disasters and risk management in the health sector, and a summary of the main threats and vulnerabilities that today combine and interact to increase or decrease the impact of disasters on health, especially in developing countries.

Chapter 2 – Health sector organization and policies

An overview of the role the health sector plays in risk management, its relationships and interactions with other sectors, and the guidelines, recommendations and proposed organization it should have to successfully cover all the functions related to risk management.

Chapter 3 – Disaster risk reduction in the health sector

Brings together all aspects and key issues related to risk reduction in the health sector, with special emphasis on the strategy of hospitals safe from disasters.

Chapter 4 – Health preparedness for disasters

This chapter focuses on disaster preparedness, its multisectoral nature and its application in the health sector. Establishes guidelines for each of the major technical areas that should be considered in the sector's preparedness.

Chapter 5 – Health response for disasters and emergencies

Practical section that contains general principles, tools, and the operating instructions needed for the response to emergencies and disasters.

Chapter 6 – Rehabilitation and reconstruction

The essential political and technical aspects that help define the responsibility of the health sector at this stage and the elements that guide the planning and development of these actions.

Chapter 7 – Alliances and international assistance

A review of all aspects and key issues needed to understand the international context of humanitarian action and cooperation in the area of risk management in health and disasters, with the purpose of helping in the establishment of partnerships and decision-making.
